

Solutions for medium-sized businesses

it.wood furniture for the wood and furniture industry

Customer oriented production at low costs
with intelligent variant configuration.

itelligence

it.wood furniture integrates all parts of the process chain.

Wide range of options – the challenge in the furniture industry.

»With it.wood furniture, we offer companies in the wood and furniture industry a tried and tested complete solution based on SAP. The solution has been specifically created to address your industry's needs, especially the requirement to cope with many different product variations and configurations. The time consuming maintenance of master data and the laborious generation of parts lists are now a thing of the past thanks to it.wood furniture.«

itelligence AG

The right solution in stock for each process phase.

A wide variety is a sales argument – more so in the wood and furniture industry than any other. Companies that combine high-quality products with the possibility of comprehensive expansion and combination are the ones that win the customers. While the production volume in the wood and furniture industry is large, very few products resemble one another. This increases unit costs, machine retooling times as well as administrative costs. In addition to this, the individual requirements of each buyer are invariably based on one uniform desire: the shortest delivery times possible!

Tailor-made for you: our it.wood furniture industry solution

it.wood furniture is a fully integrated solution from itelligence specially for companies in the wood and furniture industry. Based on the SAP solution, we have created a preconfigured

industry solution that enables you to seamlessly manage all your company's processes in sales, procurement, production and administration.

itelligence has many years' experience in the wood and furniture industry. We have used this knowledge of the industry to create an advantage for you: based on SAP ERP, processes and functions are preconfigured to meet the requirements of your industry.

it.wood furniture – in line with the requirements of the midmarket

Midsized companies in the wood and furniture industry require standard software specifically customized to their needs. The software must be scalable, easy to implement and support the typical courses of business in the industry. The worldwide leading SAP standard technology offers the best foundations for this type of software. However, the operational system's scope of functions does not completely cover the specific requirements of the wood and furniture industry. For this reason, itelligence continued to consistently develop the basic software and, with the it.wood furniture solution, now provides a complete solution across the entire value chain.

The core processes within your company are reproduced one-to-one. This ensures a uniform flow of information and thus efficient operations – from initially winning the order through production to delivery. A high degree of practical relevance is assured.

As a customer, what advantages do you have from this SAP industry solution?

With it.wood furniture:

- You accelerate the implementation of this industry solution for companies in the wood and furniture industry. This means double savings: time and money!
- We provide a high quality industrial solution that has been tried and tested
- You have fully integrated business transactions at your disposal
- You benefit from a project management that is geared towards midsized companies

A simple design is key – also the case in company management.

With our solution, we supply extensive presettings and documentation to meet your demand for an optimized and fast implementation.

This comprises:

- Clear methodology: understandable and comprehensive
- Business scenarios with master data and movement data, directly executable processes in the project work
- Detailed project and user documentation
- User roles for the key workplace descriptions
- Data sheets and proposals for the transfer of data
- Test guides for customer-specific function and integration tests
- Proposals for the most common forms

The tried and tested intelligence method of implementation comprises the structured usage of the SAP system in the project work with clear milestone planning. Once the predefined milestone has been reached, the respective project progress is reported – a built-in continuous quality control measure. Product complexity in the wood and furniture industry is enormous – the order reporting for the individual customer remains efficient. This is ensured by our solution’s logical functionality and high degree of user friendliness. Global header data such as contract numbers, customer information or supply conditions can be created easily, clearly and flexibly. This applies equally to header data as well as item-independent attributes e.g. surfaces and materials: once they have been entered they are automatically transferred to the individual order items. If the basic infor-

mation, which has already been created, changes, the system will automatically update the items affected. This not only saves time but is also secure. When can we expect delivery? Using it.wood furniture, you can already answer this central question at the point of order entry. The program automatically calculates the procurement cycle for standard elements and customer-specific components, adjusts the volume of orders to the capacity available and dependently determines the exact delivery times.

»it.wood furniture is the optimal solution to support your sales and production processes. Clear, understandable and secure.«

The topic of assembly hardware packets generation: The small components necessary for an order such as screws or handles will be ordered in a respective independent position and will also be delivered. This means that all components can be added completely within a cycle removing the need for unprofitable pre-assembly in the plant.

Dependable delivery of almost 100%

An ambitious but realistic goal! With the integrated process management from it.wood furniture, you can successfully dependably carry out this customer priority while simultaneously fulfilling your own requirements of shorter production times, optimally utilized production systems and lower inventory levels. The actual and estimated status of your orders is continually checked and potential deviations are displayed. This enables you to identify bottlenecks at an early stage and immediately take counter-measures.

Our experience shows that every industry has its own specific IT requirements, owing to their different processes. This is why at itelligence, IT and industry specialists work in close collaboration to produce your solution.

itelligence SAP Business All-in-One industry solutions are preconfigured for the typical business processes of a specific industry, thus enabling costs and implementation times, in particular, to be radically reduced. Other benefits include almost unlimited scalability and a high level of flexibility, as well as increased productivity and cost control.
